2.3 Explanation of Cause of Death in Registration of Death

A doctor qualified in law to certify a death, is required by law to certify the condition or conditions which caused a person’s death. This certification is carried out immediately following a death and then forwarded to the Superintendent Registrar. In other cases, the Viscount provides confirmation to the Superintendent Registrar of the medical conditions which caused the death following further investigation and/or inquest.

Once established, these conditions are then registered as ‘Cause of Death’ on a death registration by the Superintendent Registrar.

‘Cause of Death’ within a death registration sets out four separate, but related, sections for the recording of these conditions as follows:

- 1a. The disease or condition that lead to the death*
- 1b. Due to or as a consequence of [...]*
- 1c. Due to or as a consequence of [...]*
- 2. Other significant conditions contributing to the death*

A Cause of Death must include a condition in 1a. and may include conditions(s) in any of the other sections (or be blank in some sections if not relevant).

‘Cause of Death’ on a death registration therefore represents a comprehensive narrative of all the conditions that caused the death of the person.

Only those conditions which caused the death are certified as a cause of death and registered as a ‘Cause of Death’ on the death registration. I.e. not all conditions which a person suffers with at the time of death will or should be certified/registered – only those that caused the death.

Due to the legal process involved with the registration of death, death registrations will be carried out several days following the actual date of death once all information is received and verified by the Superintendent Registrar. In the case of deaths subject to an inquest, registration will only take place after an inquest has taken place.
